Learn Git

Want to learn Git? I've made a simple cheat sheet for you. Firstly download <u>Git</u>

Configure Git username	git config --global user.name "Your Name"
Configure Git email	git config --global user.email "hey@domain.co"
Create Repository	git init example
Navigate to directory	cd /Users/Username/example
Add file(s)	git add name.filetype
Commit changes	git commit -m "I committed, yo"

View commits	git log
Connect to repository	git remote add origin https://github.com/username/repo
Push to master	git push -u origin master
Pull the latest copy	git pull origin master
Changes	git diff HEAD
Create a branch	git branch example
Switch to different branch	git checkout branch-name
Remove files	git rm 'example.filetype'
Merge branches (scary!)	git merge example
Delete a branch	git branch -d example
The Daddy Push	git push
